JAVA INTERVIEW QUESTIONS

Can we have Final Arrays In Java?

#13

Code For Interview

Final Keyword

Final keyword is applied to the variables, if a variable is made final then we cannot change its value, essentially a constant.

Note: Final in Java affects variables only, It has no affect on the objects.

In case of Objects, we can change the value but the reference can never change.

```java
public class First{

    public static void main(String[] args){

        final int a[] = {1,2,3,4,5};

        for(int i = 0; i < a.length; i++){

            a[i] = a[i] * 2;

            System.out.println(a[i]);

        }

    }

}
```
